

friendlypak
compostable product innovation

Order Form - June 2017

Friendlypak compostable products contain renewable and sustainable resources and are guaranteed not to last... After use, they can be composted and returned to the earth from where they came, this is called Cradle to Cradle rather than Cradle to Grave. Saving landfill, litter and pollution, this enhances our environment and makes zero waste possible.

Doing good is the core of our business. We want to be financially, socially and environmentally responsible, this is called 'Triple Bottom Line Reporting'. According to the Global Footprint Network - Nov. 2015, humanity is using 1.6 planets to provide the resources we use and absorb the waste we produce. Our mission is to improve on this.

Why do 'we' only recycle about 20% of our waste? There is a reason... food waste is contaminated with packaging so can't be composted... packaging is contaminated with food so can't be recycled... so it all ends life in landfill. It makes sense then to use Compostable Packaging so both food & packaging can be composted together.

All our products are compostable, except of course the bin systems which are meant to last, these are proven collection and waste separation systems to support food, green waste, recycling and landfill rescue. Friendlypak provides economical earth friendly alternatives that replace old world petroleum based options that are everlasting and damaging our only planet.

Friendlypak has the largest range of compostable and sustainable products, these are genuine and contain renewable resources that are grown and manufactured sustainably, enabling reduced dependence on oil. They contain no toxic or harmful ingredients and have a superior TLCA (total life cycle analysis). They also have a reduced environmental footprint, are low carbon, traded fairly and produced without exploitation or harm to people or animals. Our certified products have been certified compostable to one or more of the following standards.

Home Compost Standard

Certified for Organics

American Compost Standard

European Compost Standard

Bag pak - bin liners and waste bags

The BioBag range are certified 'Home Compostable' and include sustainable and renewable resources. All crops used are non-food origin, grown using sustainable farming practises on marginal land in European Union countries; no palm oil and some crops are grown to assist in remedial land recovery. BioBag's are even animal safe, they are suitable in worm farms, and even sea creatures can digest BioBag's. The BioBag material 'breaths' making them suitable for keeping produce fresh without sweating (unlike plastic bags).

Bin Care

Whether commercial, domestic or institution, food capture or convenience, we have the 'best practice' bin and waste systems that provide many convenient options. Key products include the world leading Ventilated Food Scrap Caddy system invented by BioBag in 1998, the Office Desk Cube and Recycling Tray that can produce greater than 90% diversion from landfill overnight and great looking compact recycling stations for all waste stream separation. We specialise in the removal of the 'yuk factor' from organic materials and food scrap collection.

Platter Boxes and Carry Packs

Compostable kraft board platter boxes with corn-starch window and lift out dividers that are smart enough to use for serving the food. Ideal for catering, transport and presentation while keeping food fully protected. No need for expensive platters to be tracked, returned or collected, saving time and money. Durable carry packs with handle when fragile bags won't do. Combine with Pop Starch for a safe and attractive pack for fragile or expensive items.

Cold Cup

Made from PLA corn-starch, not plastic for 55% less carbon. Strong, rigid, light and completely compostable. Perfect for cold drinks up to 40°C. Our funky green straws are completely compostable too! PLA is commercially compostable meaning it needs a properly constructed hot compost. It will breakdown in say a cold dry home compost but it may take longer than the 6 months required to meet the international compostable materials standards. Custom printed cold cups can be provided from 20,000.

Cutlery

Among the range of cutlery is the Vegware award-winning compostable cutlery, the ONLY cutlery made from recycled corn-starch, making it super low carbon - it is called RCPLA (Recycled Crystallised PLA). Sleek and strong it takes heat up to 85C and now available in BLACK. Compostable film wrapped Cutlery Sets can be custom printed to order. Also, a NEW range of T-spoons in 6 colours compliment the Timber and Bamboo options. Timber and bamboo skewers, sliders and forks, even colour coded for food type identification.

Foam Pak

Pop Starch - made from starch and expanded with steam like Pop Corn. Fully Compostable and biodegradable meaning ZERO disposal costs unlike Foam Polystyrene. Pop Starch is naturally anti-static making it is faster for packing and clean-up, ideal for mail order and export packing protection. Multi-bag dispensing hoppers are also available to conveniently speed your packing lines. Water resistant Bean Bag Fill that won't pollute and is completely made from starch and foamed with CO2. Flat 3mm foam starch sheet replaces Bubble Wrap. Wave like flexible 5mm foam sheet provides superior impact protection. Multiple layer sheets can be custom shaped for packing protection.

Food serve - bowl plate and tray

Versatile range of serve ware made from sugarcane after sugar extraction, 99% less embodied carbon than polystyrene. Suitable for hot, wet or oily foods, use from -20°C to 120°C in the microwave or freezer. New Zealand's own Potatopak made from Potato starch with all ingredients food grade, including the colours. After use, these can even be used for pig or fish food or in a worm farm. They have great oil and grease resistance but will soften with extended exposure to wet food. Stylish range of Bamboo disposables for premium events, made from annually renewable farmed Bamboo. The Areca palm leaves used have naturally fallen to the ground before being pressed into shape, robust enough to be used in the microwave or oven. Elegant Japanese designed Wasara tableware for special occasions, takes single-use tableware to a new level. Water and oil resistant and made from tree-free materials – sugar cane, bamboo and reeds, all fully Compostable.

Hygienepak

BioDog bags - safe, hygienic and a convenient way to follow your dog. Even though the bags are compostable the 'doggy doos' are not always safe for a compost due to their uncontrolled eating habits or oral treatments sometimes required. Therefore, after use simply thrown the BioBag behind planting where nature will do its work for free! BioToi - the best 'Chemical free' portable toilet: durable, lightweight and folds away. The no smell, no mess, BioBag liners are certified disposable in any sewage system or septic tank.

For food on the move! Versatile range of serve-ware made from sugarcane after sugar extraction, 99% less embodied carbon than polystyrene. Suitable for hot, wet or oily foods, use from -20°C to 120°C in the microwave or freezer. Sustainably sourced kraft board, that has water and grease resistant coatings and windows that are all compostable, ideal for both hot and cold takeaway food and event catering, most packs have leak-proof webbed corners. New Zealand's own Potatopak made from Potato starch with all ingredients food grade, including the colours. After use, they can even be used for pig or fish food or in a worm farm. They have great oil and grease resistance but will soften with extended exposure to wet food. Compostable kraft board sandwich wedges feature clear corn-starch (PLA) window – for 51% less carbon than PE plastic film. Hot and crispy pouches use a patented double layer of perforations to keep heat in while letting steam out. Oven-able wraps provide a 'cook, store and serve' solution in the one pack.

Sheets and Wraps

Our greaseproof is oven and microwave safe up to 220°C. Made from sustainably sourced FSC-certified paper, in chlorine-free white or unbleached using compostable grease proofing. For cold food, our low carbon PLA sheets offer great visibility and freshness, with 72% less carbon than plastic. Ideal as a wrap or deli cover for point of sale.
